## **DETAILED ACTION**

### ***Specification***

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 7, 20-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Yun et al. (6,064,265).

Regarding claim 1, 20, Yun et al. (Fig. 3) disclose a gain control amplifier comprising: a transistor (not label) can be read as a first gain stage and a transistor (T2) can be read as a second gain stage having the function thereof; a feedback circuit (301) response to output signal (OUT); and a transistor (T1) can be read as gain control circuit having the connection and function thereof.

Regarding claims 2, 3, 21, 22, wherein the operations claimed can be seen in column 3, lines 23-43 and column 4, lines 1-25.

Regarding claim 7, wherein the reference circuit is at least one of the amplifier claimed (a single-ended/cascade amplifier).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 18, 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yun et al.

Yun et al. disclose the claimed invention except an antenna and receiver claimed. However, Yun et al. circuit is capable of implementing in a communication system, such as receiver having antenna as its receiving input. As such, utilizing the reference circuit in a telecommunication system would have been obvious to one ordinary skill in the art, since reference circuit is capable of producing low noise and more linear which are desired characteristics in any communication process (see claims 1-3 above).

***Allowable Subject Matter***

Claim 17 is allowed.

Claims 4-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional reference (Jones (4,564,818)) shows feedback circuit.

This art is deemed relevant and should be carefully reviews before any amendment is filed.
